

## **EZLYNX SYSTEM REQUIREMENTS**

EZLynx is a cloud-based software ecosystem designed to operate with today's most popular web browsers, such as Edge, Chrome, and Firefox. All of the core features of EZLynx are developed to function in the four latest major versions of these browsers regardless of the operating system.

However, there are a few features that require installation on an individual Windows-based computer:

- AL3 Transfer Manager for Downloads
- EZLynx for Outlook
- Google Chrome Extension to allow users in any environment the ability to access their quotes via the added EZLogin button in Google Chrome
- QuickBooks Support for EZLynx Accounting requires the Windows version of Quickbooks

Because these programs were designed specifically for Windows-based operating environments, they will only work in Windows and not in an OSX or Chromebook environment. Many agencies, however, have success in running virtual emulations of Windows through programs, such as Parallels for Mac, allowing them to create a virtual Windows environment to take advantage of these features.
